

Data Design Capacity Building and Design Support

Capacity Building

Identify - What are the specific design challenges your organization faces?

Assess - What are the strengths and weaknesses that allow you, as a team or organization, to respond to the specific design challenges? What opportunities exist?

Support - Individualized group, one-on-one, phone, webinar, in-person, or short-course support. With full-access to my online digital workshop for your entire team throughout our engagement (diydatadesign.com/courses).

Design Support

Professional tools - Adobe Creative Cloud, Tableau Desktop Pro, and a collection of web/content design support tools.

Data Experience - There are many designers in the world, but only so many have a social science graduate degree and well over a decade of research and evaluation expertise.

Lead by Example - By mixing design and capacity building I share not only the products of my work, but also the process and tools. Allowing your team to learn through a very practical example.

About Chris Lysy

I have worked within the research and evaluation worlds since 2003 as a data analyst, data collector, graphic designer, online content designer, web designer, illustrator, web communications specialist, and visualization expert.

The breadth of my expertise allows me to use and teach valuable tools & tactics unknown to most data people.
